Subject: adopt the biodiversity provision

As an organic farmer AND naturalist, I strongly urge adoption of the biodiversity rule before the NOSP. Only by working with nature can we succeed in providing for ourselves, the community and the land we share with all living things. A good example of this is the reintroduction of wolves in Yellowstone has had the effect of reforesting the aspen groves that were disappearing. The remains of wolf kills leave nutrients to nurture emerging aspen seedlings. This is a graphic example of the interrelatedness of all nature
